

PhyCura

PhyCura

Farmer friendly hoof care

Innovative and effective hoof treatment

PhyCura is a hoof care solution made from plant-based ingredients including tree resin and essential oils. The antibacterial properties of these ingredients ensure that PhyCura provides safe and healing hoof care. The inclusion of unique nanotechnology ensures high solubility, optimal adherence and effective application. The product is easy to apply and very user-friendly.

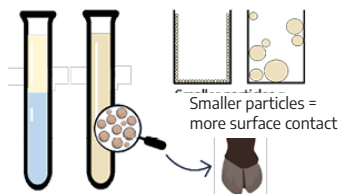

PhyCura

- ▲ Excellent water solubility
- ▲ Optimal adherence thanks to unique nanotechnology
- ▲ Nourishing effect guarantees a healthy hoof
- ▲ Effective treatment of infectious conditions including digital dermatitis
- ▲ Carefully selected mix of plant-based ingredients.
- ▲ The safe and sustainable option for farmers, cows and the environment.
- ▲ Competitive in cost per footbath.
- ▲ Biodegradable - no negative impact on manure quality

What is PhyCura made from?

Carefully selected plant-based ingredients - including tree resin and essential oils - form the basis of PhyCura. These natural ingredients are safe for farmers, cows and the environment. This hoof care product is biodegradable and non-corrosive. Therefore, PhyCura has no negative impact on manure quality.

What is nanotechnology?

Nanotechnology manipulates the molecular structure of the ingredients, reducing them to the size of extremely small particles. This increases the particle surface contact with both water and the hoof. Nanotechnology is unique and patented; it ensures a highly effective application of plant-based ingredients.

Instructions for use

- ▲ Mix 1.5 – 4 liters of PhyCura in 100 liters of water.
